

Program 2 Part 1 Grade Rubric (61 points)

Course: CSC 1310-001 Data Structures and Algorithms - Spring 2026

Criteria	Excellent Job!	Good, But Small Issue(s)	Needs Improvement	Unacceptable	Criterion Score
Compilation - your program will be compiled with -Wall to view all warnings.	10 points Program compiles with no errors or warnings.	8 points Program compiles but there are warnings.	6 points Program doesn't compile, but requires a simple fix to compile in order to grade.	0 points Program doesn't compile. Going to have difficulty grading because of severity of syntax errors in program.	/ 10
Good Programming Practices - includes white-space in code, comments, indentions, and ways of solving algorithms	10 points Used good programming practices.	8 points Mostly used good programming practices.	5 points There were some issues with not following good programming practices.	0 points There were multiple issues with not following good programming practices.	/ 10
Bubble Sort	5 points Bubble Sort function and function prototype is correct and results in a sorted vector.	3 points Bubble Sort function and prototype are mostly correct but there is a small issue.	2 points Algorithm doesn't follow the bubble sort algorithm, but it sorts the vector.	0 points Did not implement the bubble sort algorithm and/or algorithm does not sort the vector.	/ 5
Parallel Bubble Sort (Odd-Even Sort in parallel)	10 points Parallel Bubble Sort function and prototype is correct, uses OpenMP correctly to run the code in parallel as specified, and results in a sorted vector.	7 points Parallel Bubble Sort function and prototype are mostly correct, uses OpenMP, but there is a small issue.	4 points Algorithm doesn't follow the odd-even sort algorithm as specified or didn't parallelize the algorithm, but it sorts the vector.	0 points Did not implement the parallel bubble sort algorithm and/or algorithm does not sort the vector.	/ 10

Criteria	Excellent Job!	Good, But Small Issue(s)	Needs Improvement	Unacceptable	Criterion Score
Merge Sort & Merge Functions	10 points Implemented mergeSort() and merge() functions as specified.	7 points Implemented mergeSort() and merge() functions and they are mostly as specified but there is a minor issue with one of the functions.	4 points Didn't fully implement mergeSort() and merge() functions - they do not work fully.	0 points Didn't implement mergeSort() and merge() functions.	/ 10
Parallel Merge Sort	10 points Parallel Merge Sort function and prototype is correct, uses OpenMP to run the code in parallel as specified, and results in a sorted vector.	7 points Parallel Merge Sort function and prototype are mostly correct, uses OpenMP, but there is a small issue.	4 points Algorithm doesn't follow the Merge Sort algorithm or didn't parallelize the algorithm, but it sorts the vector.	0 points Did not implement the Merge Sort algorithm and/or algorithm does not sort the vector.	/ 10
Good Programming Practices were Followed (including References)	6 points Good Programming Practices were Followed: References provided if applicable, appropriate commenting, readable code, consistent indentions, efficient coding practices	3 points Programming Practices were mostly followed. There was an issue with one of the following: appropriate commenting, readable code, consistent indentions, and efficient coding practices	1 point There were issues with programming practices. There was an issue with some of the following: appropriate commenting, readable code, consistent indentions, and efficient coding practices	0 points There is an issue with following good programming practices. References were not provided when they were needed or code is not readable or comments in code were inappropriate and unprofessional.	/ 6
